| Abstract: | While the Security Council's incursion into the protection of individuals or groups could appear necessary - or even praiseworthy - it should be viewed with caution. The author argues that the search for perfect complementarity between the powers of the Security Council and humanitarian action should not overlook the political nature of the Council, the omissions and inconsistencies in its decisions regarding grave offences against human dignity and the effects of coercive action - including armed force - on the provision of neutral and impartial assistance to the victims of an armed conflict. |
