| Abstract:           | The purpose of this comment is to consider how cyber warfare is currently addressed by international laws and the degree to which those laws remain both applicable and effective. The analysis proceeds in three Parts: Part I discusses the historical development of cyber warfare and its increasing usage in modern conflicts. Part II considers the applicability of current international laws to the realm of cyber warfare, and Part III considers broad changes needed within the international law paradigm to allow for the effective regulation of cyber warfare. |
